=====
Project 02 - mini_shell
-----
this program is a mini simulator of shell
program prints the user line [username]@[hostname] $
when the user write a command (but "cd") the mini shell
creates a new process and it performs the command
when user press 'cd'+ direction at the command line mini shell gets to this path
when user press CTRL+C the mini shell kills the son proces but not the father
when user press 'exit' the program ends.

Submitted Files
-----
